Configuration	3

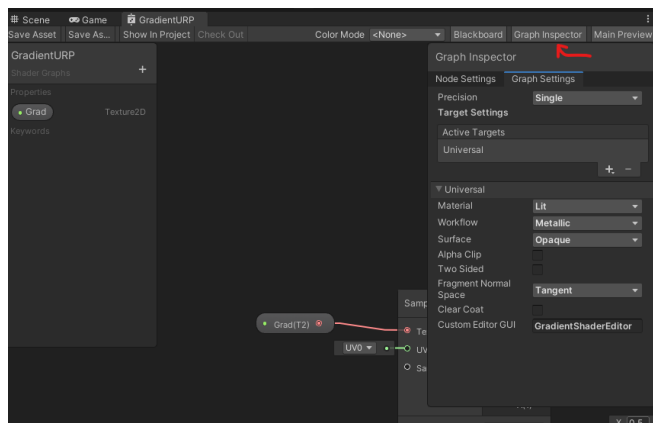

Step-by-Step Guide

Built-In

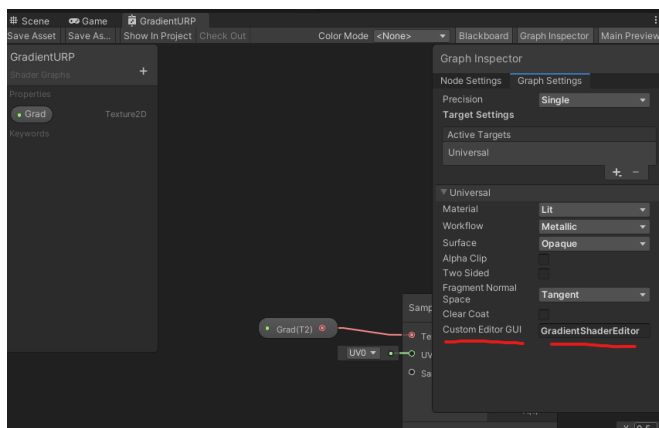

1. Open your Shader of choice.
2. Add **CustomEditor "GradientShaderEditor"** to the end of the shader.

URP & HDRP (GRAPH)

1. Open your Shader Graph of choice.
2. Open the "*Graph Inspector*" on the top right of the window.

3. Select the "*Graph Settings*" tab in the newly opened Graph Inspector window.
4. Under the property called "*Custom Editor GUI*" add **GradientShaderEditor**

To create a new Gradient (both Built-In & URP/HDRP)

1. Create a new Texture2D property.
2. Under the "Reference" name include **"GradientTexture"** anywhere in the name.
3. Save the shader and you're done!

Configuration

1. Open the "Gradient Shader Editor" script.
2. Configure to your liking:
 - a. "regex" - naming convention (what the "reference" of a gradient should include)
 - b. "resolution" - resolution of the generated texture for each gradient
